

**Report on the 2012 Administration of the
UIC Entering Student Survey
Sorted by College of Enrollment**

October 2012

**Office of the Vice Provost for
Academic and Enrollment Services**

**Office of the Vice Chancellor
for Student Affairs**

Introduction

The Entering Student Survey (ESS) is an instrument designed to gather general trend data on new freshmen as they enroll at UIC. This is the fifth year for UIC administration of the ESS. A total of 2825 (90%) of the 3123 new freshmen enrolled for Fall 2012 completed the survey during summer orientation. Of the students who completed the survey, 2630 provided a University Identification Number (UIN) which allows us to present additional information and conduct follow-up analyses.

The Entering Student Survey was first administered to UIC students who entered as new freshmen in the Fall of 2008. The survey is a two page instrument designed at UIC to gather information about new students' pre-enrollment attitudes and dispositions; as well as their aspirations and expectations. Most of the questions have remained from the 2008 instrument. Many of the questions are common to a variety of nationally marketed new student surveys. A total of 14 tables are presented which summarize the results of student responses to different sections of the ESS.

For more information about this report, contact Pat Inman (pinman@uic.edu).

Important note regarding this report

This report presents summary data in table form disaggregated by college of enrollment. Two caveats must be noted regarding this particular report. First, college of enrollment can only be traced to students who provided a UIN. A total of 195 respondents did not provide a UIN. These responses are included in the overall responses (ALL columns), but are not attributable to any specific college. Second, because of the small number of respondents from the Colleges of Education and Applied Health Sciences (57 and 98 respondents respectively), these numbers should be viewed with caution.

Survey Instrument

The Entering Student Survey is a survey instrument developed by UIC administrators with the advice and input of the University Data Analysis Group (UDAG). The survey was initially administered during the summer 2008. It is a two-page paper and pencil instrument. It includes 110 quantitative items distributed as follows:

- 8 background information about students
- 13 items on pre-enrollment characteristics and behavior
- 18 items related to student pre-disposition and self-assessment of motivation
- 30 items on the college choice and decision
- 40 items related to student aspirations and future plans

The survey includes one open-ended question on the native language of students who indicate that English is not their first language. In addition, the survey requests student University Identification Number (UIN). Use of the UIN allows us to report demographic characteristics of the respondents.

Administration of the Survey

The participants were students admitted to UIC as new freshmen who attended one of 14 summer orientation sessions held on the UIC campus during June, July and August 2012. Of the new freshmen students who participated in summer orientation, 2786 completed the ESS. This represents 91% of the new freshman cohort. Of the students who completed the survey, 2825 provided a UIN (93% of the completers). The table below details the distribution of survey participants by racial/ethnic and college of enrollment compared to the entire freshman cohort.

Fall 2012 New Freshman Enrollment and ESS Participation					
	New Freshmen		ESS Participation		% of cohort participating in survey
	Number	% of cohort	Number	% of cohort

Highlights from the 2012 ESS

The Entering Student Survey (ESS) is a two-page instrument designed to gather information about new students' pre-enrollment attitudes and dispositions, as well as their aspirations and expectations. Most of the questions have remained the same across the five year history of the survey and many of the questions are common to a variety of nationally marketed new student surveys.

We have known from past surveys that a first language other than English is one of many aspects of diversity among our students. This year 30% of the students reported that English is not their first language (up from 29% in 2011). By comparison in a 2008 report from the Cooperative Institutional Research Program (CIRP) based on results from a national survey of over 250,000 freshmen at colleges and universities across the country, only about 8% of the respondents indicated that English was not their native language.

A follow-up open-ended question allowed students to report their first language. Thus, allowing us to capture the breadth of diversity in languages among our new students. Of the 723 students who completed the open-ended question, fifty-three languages were named. Of the students who indicated that English is not their first language and named a first language, the most frequently reported languages were:

- Spanish - 40%
- Polish – 12%
- Chinese (including Mandarin and Cantonese) – 7%
- Urdu – 6%
- Gujarati – 6%
- Korean – 4%

Generally, the disaggregation of the data by college of enrollment did not uncover many surprises. However, some interesting and noteworthy differences include:

- Engineering students far outpace their peers in their assessment of their own math and academic abilities. As might be expected, they also are least likely to anticipate needing academic support while in college.
- AHS students rate themselves high in their physical health and reported greater involvement in exercise or sports during high school.
- During high school, CBA students spent more time working for pay.
- A & A students are far more confident in their artistic abilities and their creativity than other students and are much more likely to hold a personal aspiration to be accomplished in the performing arts.
- Students enrolled in LAS and Education anticipate being satisfied with college at a higher rate than students from other colleges.

The results are reported in 5 sections on pages 6 through 11 of this report. The sections are: Background Characteristics; Academic Preparation and High School Behavior; College Attendance and Choice; Self-rated Abilities and Skills; and Goals and Aspirations for College and Beyond.

Explanation of Tables

Section 1: Background Characteristics

This section presents data on the characteristics and background of respondents ranging parents' level of education, concern about financing college, religion, citizenship and first language. Parent education is a recalculated variable from two questions about highest level of schooling for father and mother separately.

Section 2: Academic Preparation and High School Behavior

The tables in this section present information on students' academic preparation based on Advanced Placement course enrollment and test participation, as well as use of tutoring in specific disciplines. This section also included information on self-reported high school activities. Time spent on various activities ranging from studying, working to time spent texting provides a context for how students managed their time during the last year of high school. The figures reflect the proportion of students who reported spending 6 hours or more each week doing an activity. (Response categories ranged from: no time; less than 2 hours; 3 to 5 hours; 6 to 10 hours; and more than 10 hours.)

Section 3: Decision to Attend College

Tables in this section display the results of two questions related to the college choice and decision to attend UIC.

Students were asked to indicate the importance of various factors in the decision to attend college. Reasons listed ranged from: 'To get training for a specific career' to 'To gain a general education and appreciate of ideas'. In regard to the decision to attend UIC, students were asked to rate the importance of various factors in the decision to attend UIC; factors ranged from: 'A relative wanted me to come to UIC' to 'Not offered aid by my first choice'. Response categories for both variables were: 1) Very important; 2) Somewhat important; and 3) Not important.

Section 4: Self Rated Abilities and Skills

Students were asked to rate themselves compared to the average person their age on 18 traits associated with aspects of college preparation and motivation such as mathematical ability, self-understanding, and self confidence and drive to achieve. The responses range from: 1=*highest 10%*; 2=*above average*; 3=*average*; 4=*below average*; and 5=*lowest 10%*.

Section 5: Plans, Goals, and Aspirations

The tables detail responses to two questions regarding anticipated behaviors and activities during college in the question: "What is your best guess as to the chance you will:" followed by a list of 21 responses ranging from change major fields, to participate in student clubs/groups. A four level response scale is provided: 1) Very good chance; 2) some chance; 3) Very little chance; and 4) No chance.

Students are also asked to indicate the value placed on a range of 'life goals' ranging from 'Becoming an authority in my field' to 'Integrating spirituality into my life'. Response categories are: 1=Essential; 2=Very Important; 3=Somewhat Important; and 4=Not Important.
